## The program

 **Budget**  
449 000 €

## e-for-own

 A shared collection of educational resources for forest owners and students in the sector, likely to be enriched over time.

 An innovative tool kit for the trainers and the teachers.

 A collaborative project for updating and modernizing the technical and pedagogical approaches; also for strengthening a common forestry vision and culture.

Erasmus+

## for what reasons ?

Because the forest owners, who are the cornerstones of the sustainable forest development and whose profiles and practices are evolving, are expecting simple, attractive and modern training tools.

Because the pupils and students - the future professionals in the sector - have a major interest in understanding and appropriating the owners' expectations, practices and vision.

Because the trainers and the teachers of the sector, wish to make evolve their pedagogical approaches and their competences thanks to this type of tools ; so that they can accompany their face-to-face activities of formation - that remain indispensable. Because they wish to pool their knowledges and approaches.

## actions & expected results

From September 2016 to August 2019, 68 resources will be realized for the forest owners, the trainers of the technical forestry organizations, and the forestry teachers and their students.

Those resources :

- will be developed collaboratively
- will be available on the Internet and in 3 languages for 38 of them (French, Spanish, Catalan) ;
- will be developed under various training materials (PDF files, slide shows, Prezi, videos) ;
- will address five main themes in a complementary approach :
  - 1 - appreciating the production potential of my forest,
  - 2 - maintaining my forest,
  - 3 - selling wood,
  - 4 - producing other goods and services,
  - 5 - ensuring administrative procedures ;
- will be jointly promoted on the respective sites of the partners, under an eforOwn logo and label ;

■ will be enriched at the end of the program, within the framework of a partnership charter aiming to ensure as far as possible the sustainability of that cooperation and its possible extension to other partners.
